Strategy Settings: Evaluation (Combine) and Funded Plans

Updated 2026-10-20. All times Central (CT, exchange time). MultiCharts on the QuantVPS (Chicago), Rithmic (System Rithmic 01, Gateway Chicago Area). Code: the repo files named below (private repo: open on GitHub while logged in, or *git pull* in C:\TradingVault). Add new code as a NEW signal, never paste over an old one (MultiCharts keeps old input values).

1. Evaluation (combine) plan - Apex 50K EOD

Rules: +$3,000 target (pass at $53,000), $2,000 end-of-day trailing drawdown, $1,000 daily loss limit (Apex closes everything and locks the day), flat by 15:59 CT. Backtest: about 50% pass per try, median 6 trading days. Start new evaluations 5-10 trading days apart; each account gets its own chart set (copier only later, for funded accounts). Relative Strength is NOT used in evaluations (lowers the pass rate).

Strategy	Code (repo file)	Chart	Inputs (evaluation)	When it trades
Vault Break	apex_strategies/NQ_Vault_Break_SP.txt (or the pre-NR7 version)	30-min MNQ, CME 24h, Exchange time, Bar Magnifier 1 min	NumContracts **8**, FlaggedContracts **-1**, NR7Contracts **-1** (if present); others default (NoiseMult 0.30, TargetPts 40, StopPts 75, FirstDecision 1000, Flatten 1430)	Long breakouts above the noise level and VWAP, decisions from 10:00, flat 14:30 (half-days 11:30)
Overnight Bias ADX30	apex_strategies/NQ_Overnight_Bias_ADX30.txt	15-min MNQ, CME 24h, Exchange time, Bar Magnifier 1 min	RiskPerTrade **1100**, NumContracts 1, ADXMin **30**, StopAtrPct **0.25**, RewardRisk 3, ExitTime 1430, EarlyExitTime 1130, EntryBufTicks 2	Opening-range break 8:45-14:00 in the overnight-bias direction, long or short; out by 14:30
Expiration Open Short (EOS)	funded_strategies/NQ_Expiration_Open_Short.txt	5-min MNQ, CME 24h, Exchange time, Bar Magnifier 1 min (30+ days loaded)	RiskPerTrade **500**, EntryBarTime 830, ExitTime 1000, StopAtrPct 0.30, ClosedFriday1-4 as in the file	Third Friday of the month only: short at the 8:30 open, out by 10:00 (next: Fri 11/20)
Bridge Monday Long	The Bridge: L644NQ_MondayLong_NQ v2.1 (not in repo)	5-min MNQ, full Globex 24h, Exchange time	NumContracts **2**, TargetPts 100, StopPts **0** (no stop), others default	Sunday 19:00 -> Monday 15:55 when its daily ADX(7) 10-50 and DI+ > DI- filter allows (~25 Sundays a year)

On every evaluation chart, next to the strategy: Apex Target Guard (apex_strategies/Apex_Target_Guard.txt): TargetBalance 53050, StartBalance = that account's Apex balance (update every evening). **Apex Trade Logger** (apex_strategies/Apex_Trade_Logger.txt): Folder C:\TradingLogs\, Tag "VB" / "ONB" / "EOS" / "MON_BR" (account #2: "VB-2" ...).

2. Funded plan - Apex 50K EOD Performance Account (after an account passes)

Goal: all 6 payouts ($13,000). Bootstrapped bench (current plan, 2026-10-28): 2-year expected payouts about $12,400, blown about 4%, all 6 payouts within 2 years in 95% of histories, median ~245 days to the 6th. Remove the Target Guard on funded charts. Sizes below are FULL size (cushion $1,500 or more); see the cushion table.

Strategy	Code (repo file)	Chart	Inputs (funded, full size)	When it trades
Vault Break SP	apex_strategies/NQ_Vault_Break_SP.txt	30-min MNQ, CME 24h, Exchange time, Bar Magnifier 1 min	NumContracts **1**, FlaggedContracts **1** (single-print filter on), NR7Contracts -1 (1/1 since 2026-10-25)	As in the evaluation
Swing Target v3 (added 2026-10-25)	funded_strategies/NQ_Swing_Target_v3.txt	1-min MNQ, CME 24h, Exchange time, IOG off	Qty **1**, ClockShiftMin 0, defaults otherwise; logger tag ST	~70 a year; skips CME holidays
Overnight Bias ML v2	funded_strategies/NQ_Overnight_Bias_ML.txt (current file: has 'ON Bias LSG')	15-min MNQ, CME 24h, Exchange time, Bar Magnifier 1 min, 90+ trading days loaded	RiskPerTrade **400**, ADXMin 20, StopAtrPct 0.30, UseMLFilter true, LongMinScore 0.03, ShortMinScore 0	Overnight Bias on days the frozen ML score allows (~40% of days)
Overnight Tick / VIX (added 2026-10-24; replaces the Monday Long on 50K)	funded_strategies/NQ_Overnight_Tick_VIX.txt	5-min MNQ, CME 24h, Exchange time, IOG off; **Data2 = VIX_CBOE daily** (Map ASCII C:\TradingData\VIX\VIX_daily.csv)	NumContracts **1**, VIXLen 25, EntryTime 1705, ExitTime 300, PrintDiag false	After a down RTH day: long 17:05 -> 03:00 CT when order flow x VIX regime agree (~60 a year)
Expiration Open Short	funded_strategies/NQ_Expiration_Open_Short.txt	5-min MNQ (as evaluation)	RiskPerTrade **700**	Third Fridays, 8:30 -> 10:00
Late-Day Flow	funded_strategies/NQ_Late_Day_Flow.txt	5-min MNQ, CME 24h, Exchange time, Bar Magnifier 1 min	NumContracts **2**, RiskPerTrade 0, MinMoveAtr 0.40, StopAtrPct 0.25, SignalTime 1400, ExitTime 1430	Follow a >= 0.4 ATR move 8:30->14:00, from 14:00 to 14:30
NFP Fade	funded_strategies/NQ_NFP_Fade.txt	5-min MNQ, CME 24h (needs the 7:30 bar), 30+ days loaded	RiskPerTrade **500**, SpikeMult 3.0, StopAtrPct 0.50, ExitTime 900	Payroll Fridays: fade 7:30-7:45 reaction, 7:46-9:00
Bridge Monday Long	The Bridge L644NQ_MondayLong_NQ v2.1	5-min MNQ, full Globex, Exchange time	NumContracts **1**, TargetPts 100, StopPts 0	Sunday 19:00 -> Monday 15:55 (filtered)
CL Sunday Gap Fade	funded_strategies/CL_Sunday_Gap_Fade.txt	5-min **MCL**, **Eastern** exchange time (ExitTime 1000 = 9:00 CT)	NumContracts **2**, GapAtrPct 0.10, StopAtrPct 0.75, ExitTime 1000	Sunday 17:05 CT short on a >= 0.1 ATR up-gap, out Monday 9:00 CT (~11 a year). Check Apex allows MCL first.
ES MOC Follow	funded_strategies/ES_MOC_Follow.txt	5-min **MES**, CME 24h, Exchange time, Bar Magnifier 1 min	NumContracts **2**, RiskPerTrade 0, MinMoveAtr 0.30, StopAtrPct 0.25, DecisionTime 1450, ExitTime 1500	Follow a >= 0.3 ATR 14:00->14:50 move, 14:51->15:00
T_ONESIDE fade (added 2026-10-28; replaces Relative Strength longs on 50K)	funded_strategies/NQ_T_Oneside_Fade.txt	**1-min MNQ**, CME 24h 17:00-16:00, Exchange time (cash open prints 830), IOG off, Bar Magnifier off	Qty **1**, UseT true, UseOS **false**, UseStop true (file defaults); logger tag TOS	After a heavy night (volume > 1.4 x 20-night median): fade the night 08:29 -> 08:44 CT, stop 0.40 x ATR

Cushion sizing (funded): each morning cushion = Apex balance - trailing threshold; f = cushion / $1,500, kept between 0.5 and 1; multiply each full-size input by f and round DOWN. The Bridge Monday Long uses Sunday's cushion (Friday's close).

Cushion	f	VB (Num / Flag)	Swing T.	ONB ML	OT / VIX	EOS	LDF	NFP	Bridge	CL (MCL)	MOC (MES)	T fade
$1,500 or more	1.0	1 / 1	1	$400	1	$700	2	$500	1	2	2	1
$1,125	0.75	0 (off)	0 (off)	$300	0 (off)	$525	1	$375	0 (off)	1	1	0 (off)
$750 or less	0.5	0 (off)	0 (off)	$200	0 (off)	$350	1	$250	0 (off)	1	1	0 (off)

2b. Funded plan on an Apex 150K Performance Account (account #3 and the scale-up)

Every funded input of the 10/24 50K plan x 1.5, rounded down (VB 3 / 1, ONB ML $600, EOS $1,050, LDF 3, NFP $750, Bridge 1, CL fade 3, ES MOC 3), full size from a $3,000 cushion; the 150K keeps the **Monday Long 1** (funded_strategies/NQ_Monday_Long.txt, NumContracts 1) and runs **Overnight Tick / VIX at 2** and **Swing Target v3 at 2** (in place of Dual Thrust since 2026-10-25; both 1 below the $3,000 cushion); plus **Relative Strength both sides** (TradeDir **0**, NumContracts **1**): single-history bench 1y $16,705 vs $16,067, 2y $20,038 vs $19,808, blown 0%, all 6 payouts 95% vs 93% (2 MNQ about the same, 4 MNQ blows 20%). Not used in any evaluation (50K or 150K): it lowers the pass rate at every size.

3. Setup on every live chart

Item	Setting
Auto Trading	Format Signals > Properties > Auto Trading: Broker plug-in Rithmic; ACCOUNT via the gear icon next to Rithmic (each chart set on its own account); mode AA; initial position Flat; 'Stop auto-trading after N rejected orders' = 10; intra-bar order generation off.
Chart Trading (new charts)	Click the small side-arrow on the chart's right edge to open / activate Chart Trading, then set its broker drop-down (green dot) to Rithmic and pick the Apex account. If skipped, the chart sits on SIM 001 and doesn't work.
Symbol mapping	File > Broker Profiles > Symbol Mapping (Rithmic): @MNQ -> MNQZ6 (and @MES -> MESZ6, MCL monthly when live). Roll ~Thu 12/10: MNQZ6 -> MNQH7.
Trade logger	Apex Trade Logger on every live chart, Tag per strategy (VB, ONB, EOS, MON_BR; funded: ONB_ML, MON, LDF, NFP, MOC_MES, CLS, RS; account suffix -2, -3 ...). Writes C:\TradingLogs\YYYYMMDD.csv; Task Scheduler 'PushTradeLogs' pushes it 16:10 CT; Claude fills the journal at 16:40 CT.
Stop guards	Built into VB, ONB, EOS, Monday, LDF, NFP, CL fade, Relative Strength (orders named 'SG'); T fade uses SetStopLoss. Bridge: StopPts 0, nothing to guard.
One login	Only the VPS is logged in to Rithmic with the live login. Never test a second machine during market hours.

4. Daily routine

When	What
Before 8:30 CT	All AT buttons green; Rithmic connected; no red errors left from yesterday (Logs tab); Strategy Positions flat.
After any Apex lock / disconnect / manual action	With the account flat: auto-trading off and on (initial position Flat) on the affected charts; check Strategy Positions before the next open.
Evening	Target Guard StartBalance = each evaluation account's balance; give Cowork the Apex balances for the journal.
Friday before 16:47 CT	Export the weekly MultiCharts reports into live/ and sync; Claude's weekly review runs at 16:47.
Sunday before 19:00 CT	Bridge Monday charts on (green); CL fade Sunday 17:05 when funded.
